

UK[®] 2L Xenon Minilight

Lithium Powered High Intensity
Work/Outdoor Light

UK[®] 2L Xenon Minilight

Lithium Powered High Intensity
Work/Outdoor Light

High-Intensity Minilight

The Ultimate Hand-Held Work/Outdoor Light
Built For Today's Harshest Environments

FEATURES

- Tough ABS O-ring sealed case will not corrode, dent or leak
- Rubber sheathed Lexan[®] bezel reduces glare/resists impact
- Engineered to withstand a 6' drop to concrete
- Electrically and thermally nonconductive—excellent for use in harsh environments
- High-Intensity pre-focused Xenon filled lamp in precision optical reflector
- Convenient ring/clip attaches to clothing, belt or gear
- Limited Lifetime Warranty

SPECIFICATIONS

POWER	2.1 Watts
LAMP	Xenon filled incandescent
BRIGHTNESS	37.7 Lumen
BATTERY	Lithium DL123 A-Cell (2)
BURNTIME	3-4 Hours
SIZE	1.3" x 4.4"
WEIGHT	2.9 oz
TEST DEPTH	500-foot water

Powered by Light Weight Lithium Batteries – Remains Charged For Up To 10 Years

- Incredibly bright & compact
- Perfect for Industrial applications, emergency kits, backpacks, tool kits, autos, and marine applications
- Includes ring/clip which attaches to clothing, belt or gear

UK2L
Case

Thank you for purchasing the UK 2L lithium light. You will find it to be incredibly bright, compact and ready when you need it. Powered by DURACELL® Lithium batteries, the UK 2L will remain almost fully charged even after 5 to 10 years of non-use. It is perfect for use in the rain or underwater as well as in the glove compartment, purse, first aid kit, earthquake kit or where reliable illumination may suddenly become necessary.

Lithium Battery Replacement

Unscrew the bezel and remove the reflector lamp. It is not unusual for a sweet smelling odor to be released from the batteries. Remove and replace the 2 lithium DL123A-size batteries as shown below. Make sure the o-rings and sealing surfaces are clean. Insert the reflector lamp into the case and replace the bezel by twisting it clockwise onto the case.

On/Off

Screw the bezel down by twisting it clockwise until the lamp comes ON. Turn the light OFF with at least 1 1/2 counter-clockwise turns of the bezel.

O-Ring Seal

Both the o-ring and sealing surfaces should be kept clean and free from scratches. When removing the o-ring for cleaning, tools should not be used which can scratch the ABS case or cut the o-ring. After cleaning, the o-ring should be lightly coated with silicone grease.

Care and Maintenance

- Do not allow depleted batteries to remain in the UK 2L lithium light. Dispose of them at once.
- For maximum battery life, store the light in a cool area.
- Keep area around o-ring seal clean.
- If light floods, empty contents immediately, rinse with fresh water and dry completely before reassembly.

LIMITED LIFETIME WARRANTY

UK International products are engineered for maximum performance and durability. All products carry a Limited Lifetime Warranty to the original retail purchaser to be free from defective material and workmanship under normal and intended use.

In addition, the UK International Limited Warranty covers materials used in its products to the original purchaser, from the date of purchase, as follows: plastics for 10 years; fabrics and rubber for 3 years; rechargeable batteries for 90 days; and lamps for 30 days (batteries and lamps are not manufactured by UK International).

In the event the original retail purchaser detects a defect in the material or workmanship, the product, along with proof of purchase date, should be returned to an authorized UK International dealer. UK International agrees to repair or replace at UK International's sole discretion any product found to be defective in material or workmanship within the time period specified above. For the complete Limited Lifetime Warranty write to UK International.

LITHIUM: THE NEXT GENERATION

Lithium batteries are the secret of the ultra bright and amazingly small UK 2L. Lithium batteries offer several distinct advantages over standard alkaline cells. At only 1/2 the size and weight, they allow the UK 2L to maintain constant brightness longer. During periods of non-use, lithium batteries lose electrical capacity much more slowly than alkalines. In fact, after 5 years of storage or non-use at room temperature, lithium batteries retain an astonishing 97% of their initial charge.
